

ERTS 2006

**3rd European Congress ERTS
EMBEDDED REAL TIME SOFTWARE**

25 - 27 January 2006 – Toulouse

EXHIBITION

CENTRE DE CONGRES PIERRE BAUDIS,

TOULOUSE - FRANCE

ORGANISED BY :

OVERVIEW & OBJECTIVES

The three engineers society, SIA, AAAF, SEE, representing automotive, aeronautics and space, organize this third edition of the embedded real time software congress ERTS 2006.

The co-chairing of this congress by AIRBUS and SIEMENS VDO is the sign that real cross fertilization and synergies are possible between aerospace and automotive.

2006 is the right time to get feedback from recent industrial development, such as modular avionics, flying with A380 and Autosar, close to deliver the expected world open standard platform for the car industry: the third congress will put special emphasis on lessons learnt.

Lessons learnt in applying emerging technologies (in industry) such as formal verification.

Lessons learnt in applying more and more standardized development method and approach: UML, CMM-I, etc.

Lessons learnt in the business models for software; Open Source, Embedded Software sold as a standalone product, etc.

ERTS 2006 is the right time also to look to other fields that have solved complex architecture challenges. For space down to subway from telecom network to energy distribution, key examples will be explored for the benefit of participants in search of brilliant new ideas.

ERTS 2006 will also be the opportunity to learn from the research actors what they are working on that we need to take into account in our embedded system roadmap to keep leadership in ERTS.

All those questions and more will be answered within ERTS 2006 conferences, round tables, tutorials and panels.

And last but not least: everybody delivering value in the supply chain of ERTS will exhibit their solutions from micro-controller platforms to software modules, case tools, testing and certification as well as engineering services.

We look forward to welcoming you in the historic city of Toulouse to this international and multi-cultural industry event for passionnating moments.

That's the ERTS SPIRIT.

ERTS 2004 CONFERENCE

The high scientific level of the conference program covered the main strategic axis of research and development of transport embedded software industry:

- Methods and development tools.
- On board software and hardware technology and architecture.
- Verification and validation tools.
- Embedded software business models.

ERTS 2004 EXHIBITION

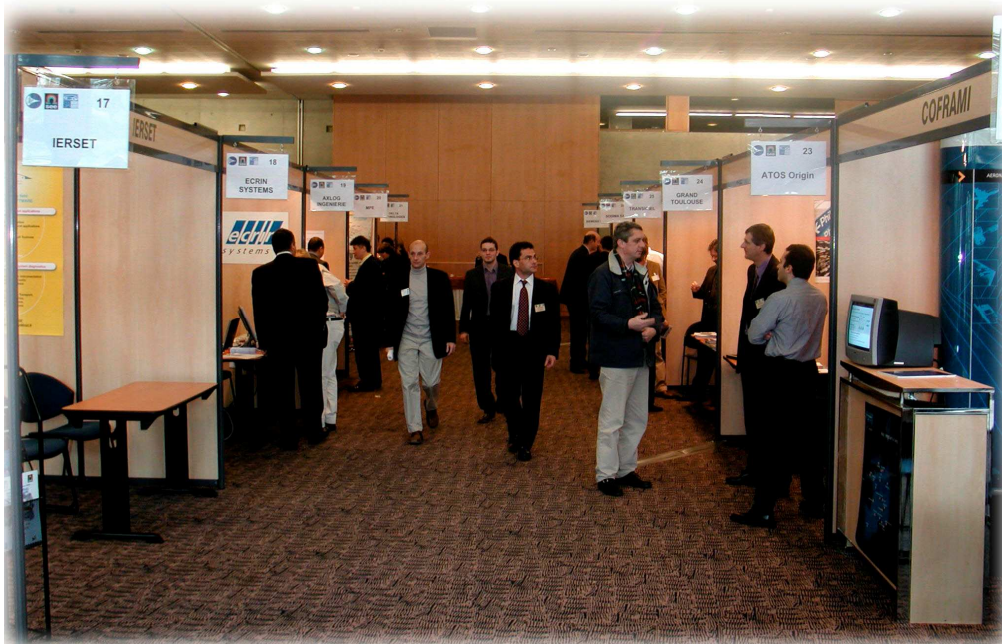

The ERTS 2004 exhibition was the opportunity for the suppliers to show their products and know-how; for the local bodies to invite regional companies involved in the embedded systems; for everybody to start profitable contacts.

ERTS 2004 Exhibitors:

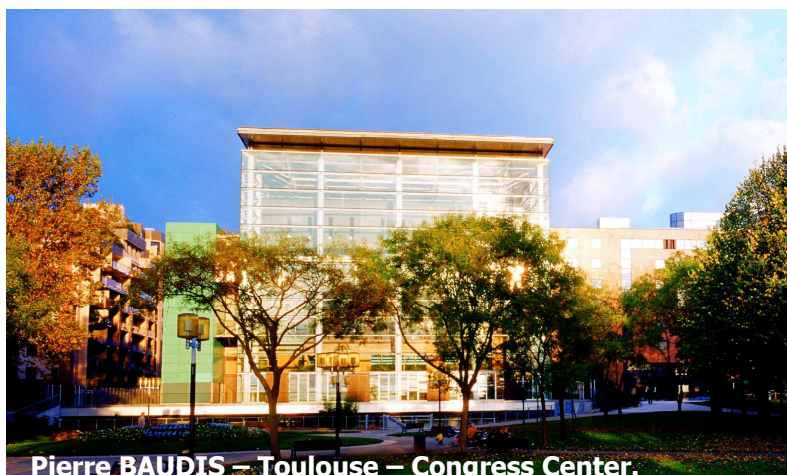

ACT EUROPE,
AONIX,
COFRAMI,
ECRIN SYSTEMS,
FEDERATION FERIA,
